

LEX FERGUSON

I'm applying for a UI/UX and Product Design role on your team. I'm a New Jersey-based designer and design engineer with design experience since 2016, currently completing a BFA in Design & Animation at Monmouth University. My focus is building digital products that are clear, useful, and production-ready.

Most recently, I led end-to-end product design and engineering for Verity Protect, an iOS call-screening app, from concept through App Store launch. I owned UX strategy, high-fidelity UI flows, and implementation handoff, and reduced design-to-development rework by 60%. I also built and maintain the web and mobile product stack for Packanack Golf Club, used daily by about 300 members and staff for bookings, food ordering, and operations updates.

My workflow runs from research and interaction design through systems thinking and shipped UI. I'm strongest in Figma, design systems, prototyping, and close collaboration with developers to deliver polished product experiences in production.

I'd value the chance to contribute that same level of ownership and execution to your team. Portfolio and case studies are available at aferguson.art.

Thank you for your time and consideration.

Sincerely,
Lex Ferguson
